

Netwrix Auditor for Exchange

Complete visibility into what's happening in your Microsoft Exchange Server infrastructure

Netwrix Auditor for Exchange helps you detect and investigate suspicious **user behavior**, such as access to other users' mailboxes or privilege elevation. In fact, its **security analytics** enable you to spot insider threats and unsanctioned actions across your Exchange environment, so you can ensure the safety of your email data and high availability of your email service.

DETECT DATA SECURITY THREATS

Netwrix Auditor for Exchange delivers complete visibility into critical changes and access events. IT teams can proactively detect suspicious activity and respond quickly, thereby mitigating the risk of security incidents and data leaks.

DEMONSTRATE AUDITORS YOUR COMPLIANCE

Netwrix Auditor for Exchange helps you prove your compliance by providing out-of-the-box reports aligned with PCI DSS, HIPAA, SOX, GLBA, FISMA/NIST, CJIS, GDPR and others. Plus, you can address auditors' questions in minutes with the Interactive Search feature.

INCREASE THE PRODUCTIVITY OF YOUR IT TEAMS

Netwrix Auditor for Exchange helps minimize email disruptions by enabling administrators to quickly detect problems and pinpoint their root causes. Moreover, its simplified reporting process and detail-rich actionable intelligence maximize operational productivity.

CUSTOMER FEEDBACK

"I don't have to process raw audit data manually anymore to identify what has happened and who changed what; instead, I receive daily enterprise-level reports that help me get a complete overview of changes in Exchange permissions as well as mailbox access events."

Slavomir Vesely, Head of IT, WOOD & Company Financial Services

Key Features of Netwrix Auditor for Exchange

CONTROL OVER NON-OWNER MAILBOX ACCESS

Email security requires keeping close tabs on users who access other users' mailboxes or shared mailboxes. Netwrix Auditor delivers insights about every non-owner mailbox access event, including who accessed what mailboxes, when and from which workstation. Plus, you get actionable information on which mailbox content was read, changed, copied or deleted, so you can investigate unsanctioned actions before they turn into security incidents.

DETAILED AUDIT REPORTS AND DASHBOARDS

Insightful predefined reports and dashboards keep you informed about all Exchange Server activity, so you can stay abreast of who made each change, when the change occurred, and what exactly was changed, including current and past values. Plus, you can subscribe yourself and other individuals to any report; the reports are automatically sent to their mailbox or dispatched to a file share according to the schedule you set.

INTERACTIVE SEARCH

Investigate an email problem or a security incident with Google-like, interactive data search. Quickly identify the root cause, determine how a change or access event happened, and avert similar issues in the future. Flexible search criteria empower you to fine-tune your search so you can find the exact information you are interested in – from what modifications were made to the CEO's mailbox permissions to who dismantled a database.

ALERTS ON CRITICAL ACTIVITY

Quickly respond to threatening activity and proactively prevent data breaches with custom alerts on threat patterns. Netwrix Auditor notifies you about suspicious activity that might jeopardize the security of your sensitive information or the availability of your email service. For instance, when someone is trying to read the content of the CEO's mailbox or change permissions to a shared mailbox, you'll be the first to know about it.

HOW IS NETWRIX AUDITOR FOR EXCHANGE DIFFERENT?

NON-INTRUSIVE ARCHITECTURE

Collects audit data without the use of agents, so it does not interfere with system processes and performance or cause any system downtime.

TWO-TIERED DATA STORAGE

Safely stores a consolidated audit data for years in a reliable and cost-effective two-tiered (file-based + SQL database) AuditArchive™ storage that you can easily access any time you need to investigate a security incident or respond to report requests from auditors.

RESTFUL API

Seamlessly integrates with any IT ecosystem through a RESTful API to further automate business processes and IT workflows, and deliver full visibility into activity across third-party solutions. The Add-on Store provides a variety of free, ready-to-use add-ons built by Netwrix, as well as help for creating your own custom integrations.
